Title: Telesoft to exhibit at CYBERUK 2018

Word Count:

Main Text:

Telesoft Technologies Ltd (<https://telesoft-technologies.com>) have announced their participation at CYBERUK 2018, the National Cyber Security Centre's (NCSC) (<https://www.ncsc.gov.uk/cyberuks/cyberuk-2018>) flagship event on cyber security. The event will take place in Manchester from the 10th to the 12th April, focusing on strategy (CYBERUK Leadership) and delivery (CYBERUK In Practice), giving delegates up to date information and industry leading insights.

Telesoft works with the global network operators and ISP's providing real time network indicators of compromise to help Cyber Defence and Network Security teams focus their time and resources to protect network assets and brand.

Exhibiting on Stand G709, Telesoft will be demonstrating a range of cutting edge network visibility technology including the ground breaking Telesoft Data Analytics Capability (TDAC) platform, which is an ultra-high rate, low query latency, Petabyte collection, and storage and query platform. The TDAC platform is comprised of four elements; flow sensor/probe, converter, search and analytics engine and dashboard /visualisation for:

- Multi- 100Gbps network visibility
- NetFlow/IPFIX/SFlow analysis
- Data centre security
- Governance, risk & compliance
- Cyber security & incident response
- Petabyte data storage
- Network congestion & utilisation
- Business intelligence & planning

Alongside the TDAC, the team will also be showcasing the CERNE Open IDS Platform, which combines a high rate 40Gbps IDS engine with automated record of relevant network traffic for real-time and historical threat investigation. CERNE continuously scans and collects all network packets and only stores traffic associated with an IDS alert, discarding all other traffic, giving an analyst rapid access to critical packets up to 2.4 seconds before an event.

For more information about the TDAC or any other product, please contact the Telesoft sales team at sales@telesoft-technologies.com

We hope to see you at CYBERUK 2018, so be sure to add the Telesoft Stand to your itinerary. If you would like to book a one to one meeting at the conference then please contact Sarah Chandley at schandley@telesoft-technologies.com
