

TDAC100

THREAT INTELLIGENCE, DETECTION & MITIGATION

All in one network security software bundle

DETECTION

Up to date threat intelligence compliments detection and mitigation of cyber threats from malware to DDoS, anonymised traffic to protocol misuse and data theft. Un-sampled and enriched flow monitoring enables deep forensic incident analysis and threat hunting, whilst event orchestration reduces alert fatigue. Detect threats and store enriched event data from within the network and applications (OSI L3-L7) including HTTP, SSL, DNS, BGP and more.

THREAT HUNTING

Security and network events are stitched together for seamless forensic pivots, providing SOCs with detailed incident alerting and event data ensuring comprehensive threat hunting, network monitoring, NPMD and compliance.

PROTECTION

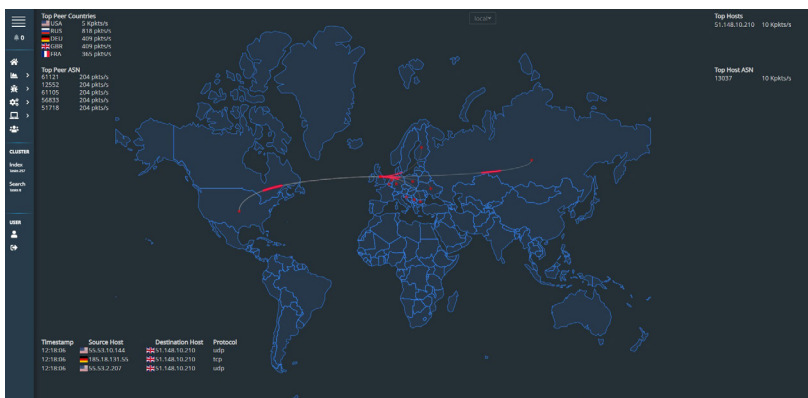

Comprehensive network mapping allows for deep understanding of the network and users enabling visibility of the threat landscape including those targeting digital assets, infrastructure, services, customers and sites. TDAC100 uses existing physical, virtual and application infrastructure to block threats and provide real-time, accurate intelligence to SecOps teams.

DEPLOYMENT AND SCALABILITY

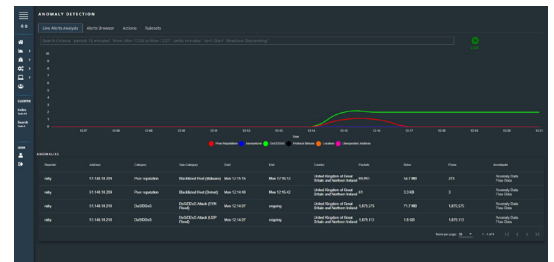

TDAC100 can be deployed and actively detecting threats within minutes in physical, virtual or hybrid network environments. Scale out in 10,000 flows/s blocks and automatically defend in a mesh across the network and application layers. TDAC100 can also be deployed alongside Telesoft's 400Gbps security infrastructure for edge, fog or NFV coverage of backbone connectivity, services and data providers.

KEY BENEFITS

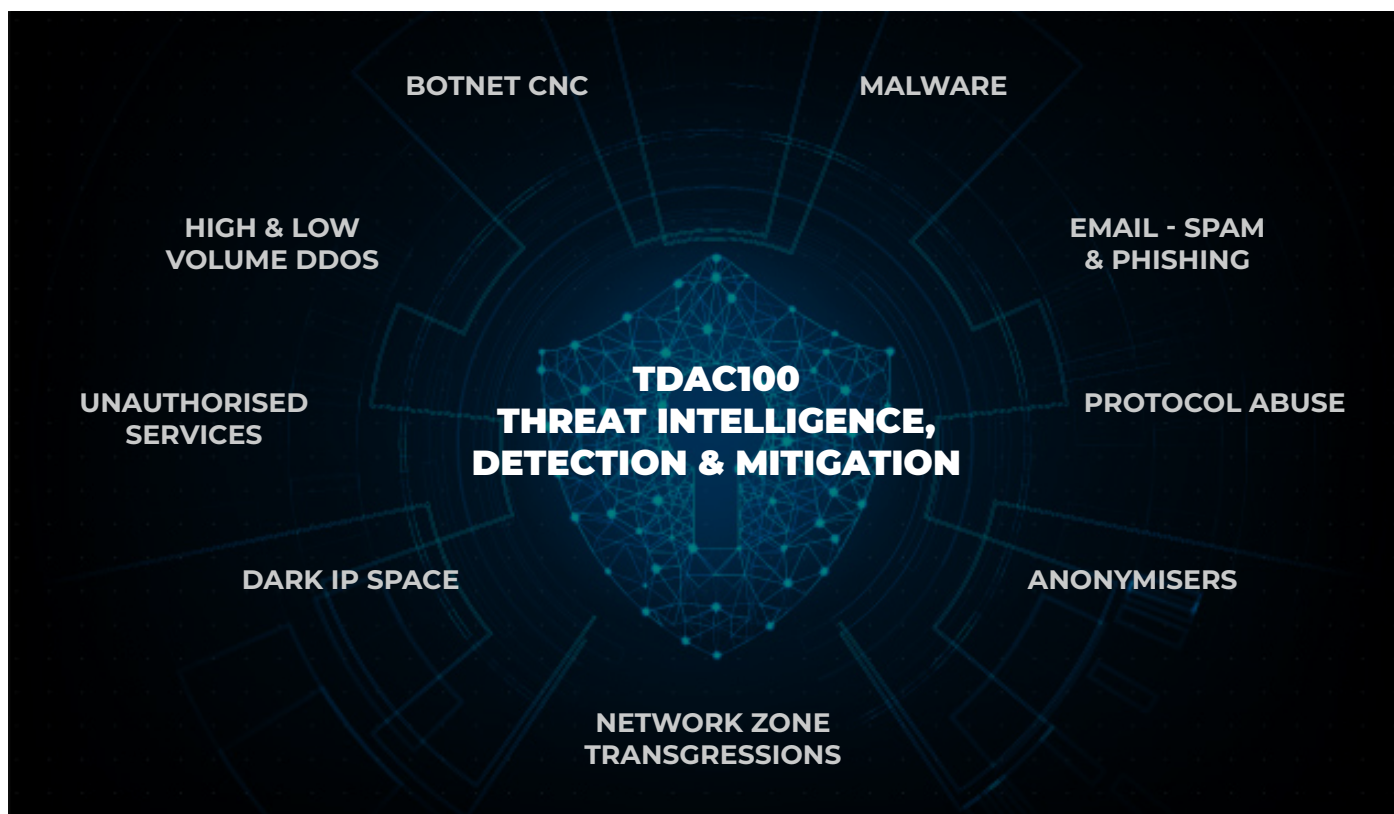

Simplified detection and forensics of attacks and APTs

Accurate and enriched threat hunting

Readily deployable in physical, NFV or hybrid environments

Highly scalable cyber threat defence as a mesh across multiple sites

Discover and provision assets and infrastructure – from medium to massive scale

MINIMUM SERVER REQUIREMENTS

Compatible Environments	Physical Server • VMware, KVM, Hyper-V, Openstack and EXSi
Cores	12 Virtual Cores
Memory	64GB RAM
Disk	50GB HDD
CPU	SSE4.2 and AVX2
