

# TDAC ENTERPRISE

## NETWORK VISIBILITY & THREAT DETECTION

Enabling defence in depth across enterprise networks

### DETECTION

Up to date threat intelligence compliments detection of cyber threats from malware to DDoS, anonymised traffic to protocol misuse and data theft. Un-sampled and enriched flow monitoring enables deep forensic incident analysis and threat hunting, whilst event orchestration reduces alert fatigue. Detect threats and store enriched event data from within the network and applications (OSI L3-L7) including HTTP, SSL, DNS, BGP and more.

### THREAT HUNTING

Security and network events are stitched together for seamless forensic pivots, providing SOCs with detailed incident alerting and event data ensuring comprehensive threat hunting, network monitoring, NPMD and compliance.

### PROTECTION

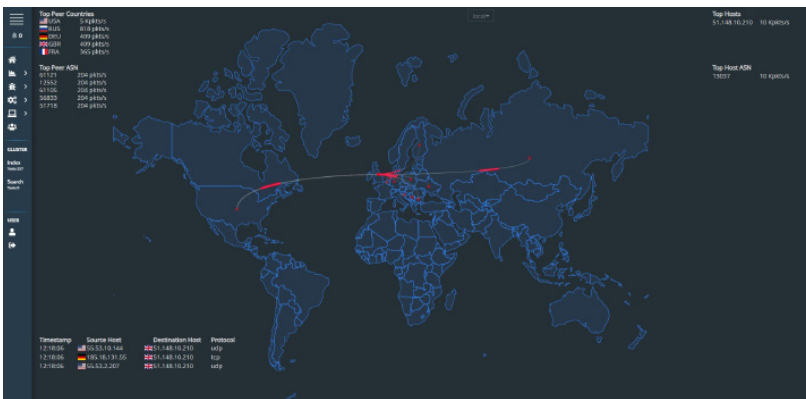

Comprehensive network mapping allows for deep understanding of the network and users enabling visibility of the threat landscape including those targeting digital assets, infrastructure, services, customers, and sites. TDAC Enterprise uses existing physical, virtual and application infrastructure to identify threats and provide real-time, accurate intelligence to SecOps teams.

### DEPLOYMENT AND SCALABILITY

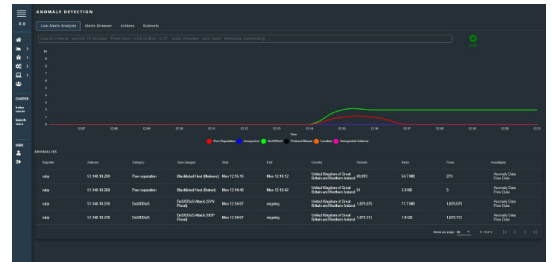

TDAC Enterprise can be deployed and actively detecting threats within minutes in physical, virtual or hybrid network environments. The TDAC Enterprise can also sit alongside Telesoft's 400Gbps security infrastructure for edge, fog or NFV coverage of backbone connectivity, services, and data providers.

**KEY BENEFITS**

Simplified detection and forensics of attacks and APTs	Discover and provision assets and infrastructure – from medium to large scale
Accurate and enriched threat hunting	Highly scalable network visibility and detection platform
Readily deployable in physical, NFV or hybrid environments	Rapidly deployed into an enterprise environment

**TDAC ENTERPRISE COMPONENTS**

vFlowProbe	The vFlowProbe is a virtual network monitoring component that ingests the network data as it moves through the network.
vCERNE	vCERNE is a virtualised Intrusion Detection System that identifies and captures known malicious activity when signatures are matched.
CyberEngine	This central component enriches the data captured by the vFlowProbe and baselines the network activity to enable anomaly detection.
User Portal	The User Portal enables digital forensics, SecOps, and Threat Hunting teams to conduct investigations, threat hunting, and user management.
Data Lake	The data lake is responsible for intelligently storing records, providing fast query times, and highly scalable data storage.

**BESPOKE DEPLOYMENT CONFIGURATION**

TDAC Enterprise	<p>At Telesoft, we recognise that no two networks are the same. Our flexible deployment options ensure TDAC Enterprise will seamlessly integrate with your existing infrastructure.</p> <p>Our experienced engineers will work to provision TDAC Enterprise to your specific network, whilst ensuring your throughput, storage and feature requirements are all met.</p> <p>Speak to our team today to find out how TDAC Enterprise can be deployed to achieve full network visibility in your enterprise network.</p>
-----------------	--

**TDAC ENTERPRISE SERVICES**

Monitoring and Alerting Service	<p>We know not every organisation has the resource to cover a 24x7 network monitoring capability, but that shouldn't mean that network visibility is inaccessible.</p> <p>Telesoft has a team of analysts capable of providing round the clock visibility over your network, alerting the relevant stakeholders to suspicious activity and providing advice on how to remediate it.</p> <p>Talk to our sales team to find out more about our Monitoring and Alerting Service.</p>
